Self-Service Access Management Made Simple

DATA SHEET

The Challenge

The accelerated digital transformation of organizations, the increased adoption of multi-cloud computing environments and remote working trends have rendered traditional network perimeter security obsolete. Employees and partners are accessing corporate data and applications using a great variety of devices and networks, private and business owned.

Security policies are shifting to a new paradigm, where security teams need to secure the access to diverse end points. Employees in organizations need access to various groups, applications, and sites to perform their job.

Managing this access is challenging, as requirements change - new applications are added or users need additional access rights. Enterprise organizations often face challenges when managing employee access to resources such as:

- Users may not know what access they should have, and even if they do, they

may have difficulty locating the right individuals to approve their access.

- Once users find and receive access to a resource, they may hold on to access longer than is required for business purposes.

This scenario gets more complicated when you collaborate with outside organizations - you may not know who in the other organization needs access to your resources, and they won't know what applications, groups, or sites your organization is using.

Entitlements management can help you address these challenges. Gartner defines entitlements management as “technology that grants, resolves, enforces, revokes and administers fine-grained access entitlements (also referred to as ‘authorizations,’ or ‘privileges.’ Its purpose is to execute IT access policies to structured/ unstructured data, devices and services.”

Access management and governance complement identity management. In tandem they provide strong authentication and authorization to secure access to your resources ”

Tina Jumani (CEO)

Executive Summary

Market	Description	Challenge	Results
Identity and Access Management	As businesses increasingly migrate data, apps and services to the cloud, entitlements management is crucial for ensuring a strong access security posture.	Manage entitlements and authorizations effectively while reducing administrative complexity and enhancing user experience and corporate data security.	Siaraa Entitlements Management automates provisioning, revocation and administration of fine-grained access entitlements to enforce access policies across the corporate ecosystem.

The Solution

Siaraa Entitlements Management is a self-service module to help a user manage their entitlements by verifying different access rights, whether it is group memberships and/or access permissions.

The owner can easily review what entitlements they own before they expire and update the entitlement catalog properties through the UI. Entitlements' review can be performed either for single or bulk entitlements with appropriate validations.

Key Benefits

Siaraa Entitlements Management self-service offers organizations safety and compliance. It serves a key role in an authentication, authorization, and access control application security model, as it authorizes users and confirms what they have, what they can see and what they can do.

Entitlements Management also makes licensing and entitlement management

The solution is flexible, scalable and integrates seamlessly with business organization.

Siaraa Entitlements Management self-service portal provides a full spectrum visibility of owned entitlements to software applications, using a single glass of pane and eliminating human-error

technology key to protecting the intellectual property of IoT connected devices, ensuring the integrity, safety and reliability of cyber-enabled processes.

Finally, Entitlements Management can greatly benefit organizations, as it can reduce costs, improve quality of service and make products or services available for customers to use in as many ways as possible.

Self	Entitlement Value	Application Name	Display Name	Description	Requestable	Privileged	Birthright	Action

Features

- Easily manage access rights
- Bulk authorization
- Dashboard to track due dates
- Validation by administrator

Benefits

- Safety and compliance
- Reduce costs
- Improve quality of service
- Increase time to market

Summary

Robust access management is the cornerstone of modern security policies towards a Zero Trust approach. Entitlements Management gives entitlements owners the flexibility and scalability to manage their access rights, avoiding costly outages due to expired authorizations, while enabling safety
